Google Colab VS Code Extension

Colab is a hosted Jupyter Notebook service that requires no setup to use and provides free access to computing resources, including GPUs and TPUs. Built atop the [Jupyter extension](#), this extension exposes Colab servers directly in VS Code!

-  [Bug report](#)
-  [Feature request](#)
-  [Discussions](#)

Quick Start

1. Install [VS Code](#).
2. Install the Colab extension from either the [Visual Studio Marketplace](#) or [Open VSX](#).
3. Open or create a notebook file.
4. When prompted, sign in.
5. Click `Select Kernel > Colab > Auto Connect`.
6. 🥳 Enjoy!

See our [user guide](#) for more things you can do!

Commands

Activate the command palette with `Ctrl+Shift+P` or `Cmd+Shift+P` on Mac.

Command	Description
Colab: Remove Server	Select an assigned Colab server to remove.
Colab: Sign Out	Sign out of Colab.
Colab: Mount Google Drive to Server...	Append a code snippet to the active notebook to mount Google Drive.

Contributing

Contributions are welcome and appreciated! See the [contributing guide](#) for more info.

Data and Telemetry

This extension collects identifiable usage data and error reports to improve your experience. Telemetry collection respects VS Code's built-in telemetry setting. To opt out, set `telemetry.telemetryLevel` to "off" in your VS Code settings.
